Mirrors

Master mirror makers

Deknudt Mirrors is a 3rd generation, family-owned company. Thanks to our 100% vertically integrated production and testing process, we guarantee premium quality and have built up an excellent reputation. We are ISO 9001-2015 certified.

Our core business is the production of single and double sided mirrors for bathroom cabinet producers and wholesalers globally.

Meanwhile, our sister company offers unseen decorative mirrors for the worldwide retail- and project market.

Since 1946, we produce our mirrors in our Belgian plant. Every single mirror goes through the hands of our 90 skilled and experienced craftsmen that we proudly refer to as our Master mirror makers.

Premium quality and service combined with honesty in all our professional contacts, are key factors in our success story.

Jan Deknudt,
owner

Reflecting commitment to the planet

DEKNUDT MIRROR WORKS

Besides the fact that our mirrors will last for many lifetimes, they are among the most environmentally friendly on the market. The manufacturing process in our ISO certified, Belgian plant complies with the strictest environmental legislation. We only use the best European glass, which contains 30% recycled materials.

Furthermore, we reduce our ecological footprint to a minimum.

- 3800 solar panels
- 25% reduced energy consumption
- Strongly reduced water waste
- Elimination of harmful substances
- Electrical car policy and bike leasing
- Eco-friendly packaging

We have worked hard to create and maintain an environment of respect for nature. Moreover, our generation-long DNA of respect extends to everyone we collaborate with, including clients, suppliers and, above all, our valued employees, our Master mirror makers.

Master skills

Silvering glass

We master this refined process by transforming transparency into reflections. We cover the best European glass with a thin layer of silver. Our one-of-a-kind silvering conveyor ensures our long-standing premium quality image.

Silvering glass

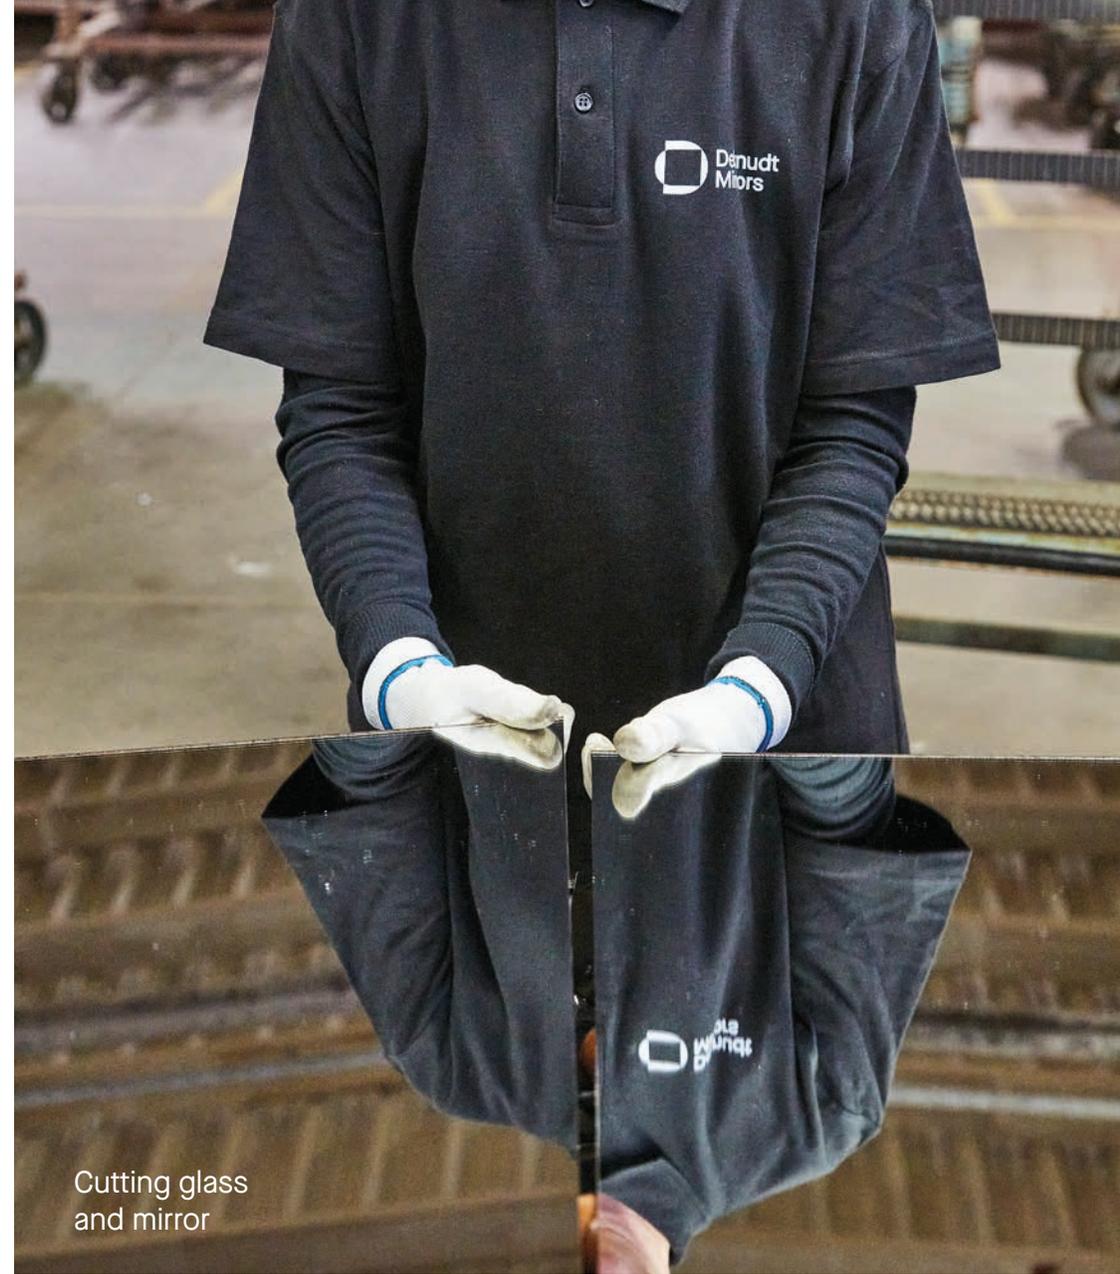

Cutting glass and mirror

CNC controlled machines cut glass sheets into various sizes, depending upon the further requirements of the production process. The different steps in this process are very delicate and are carried out carefully and precise by our skilled workers.

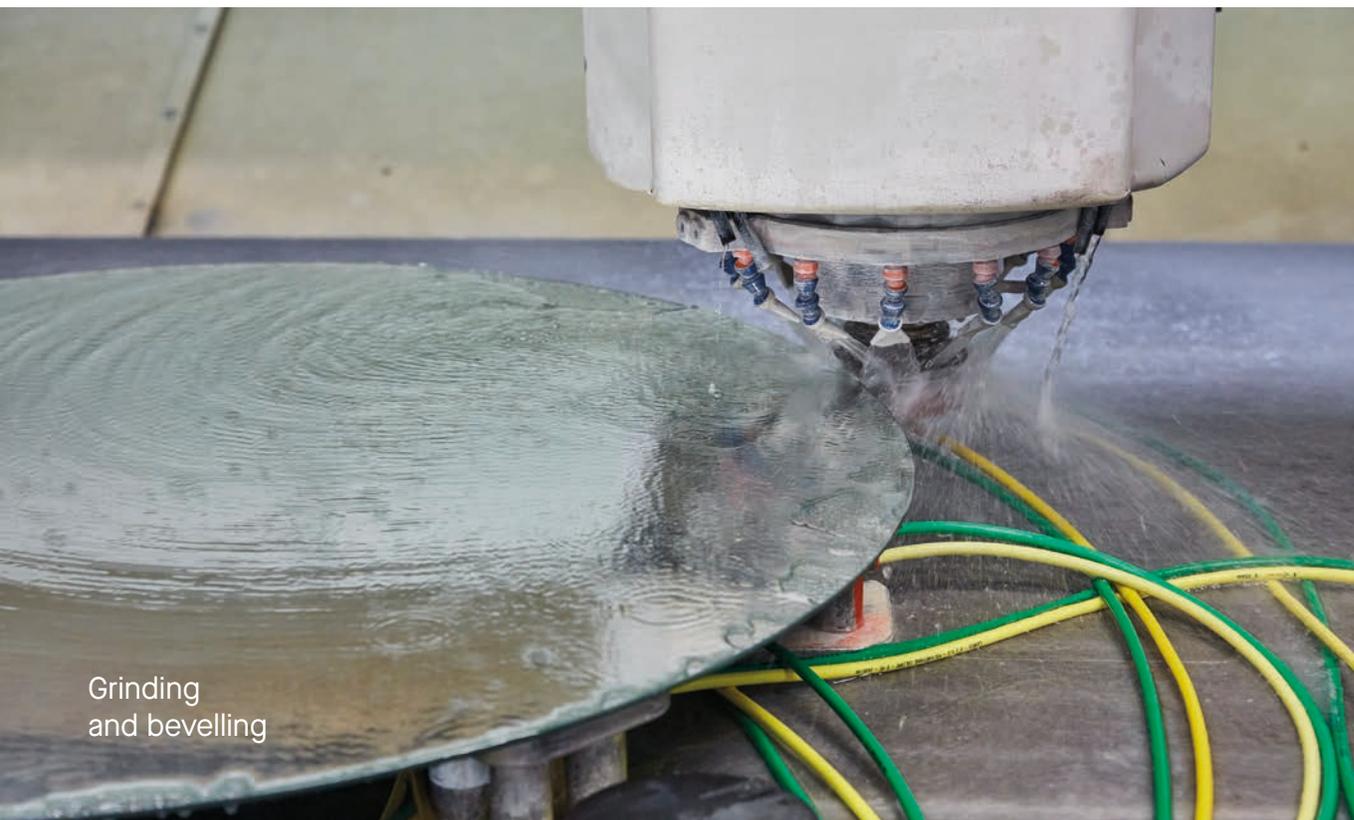

Grinding and bevelling

We grind the edges with a diamond wheel in order to have a nice and smooth result. The edges can be flat or pencil-shaped, finishing from mat, smoothed or polished.

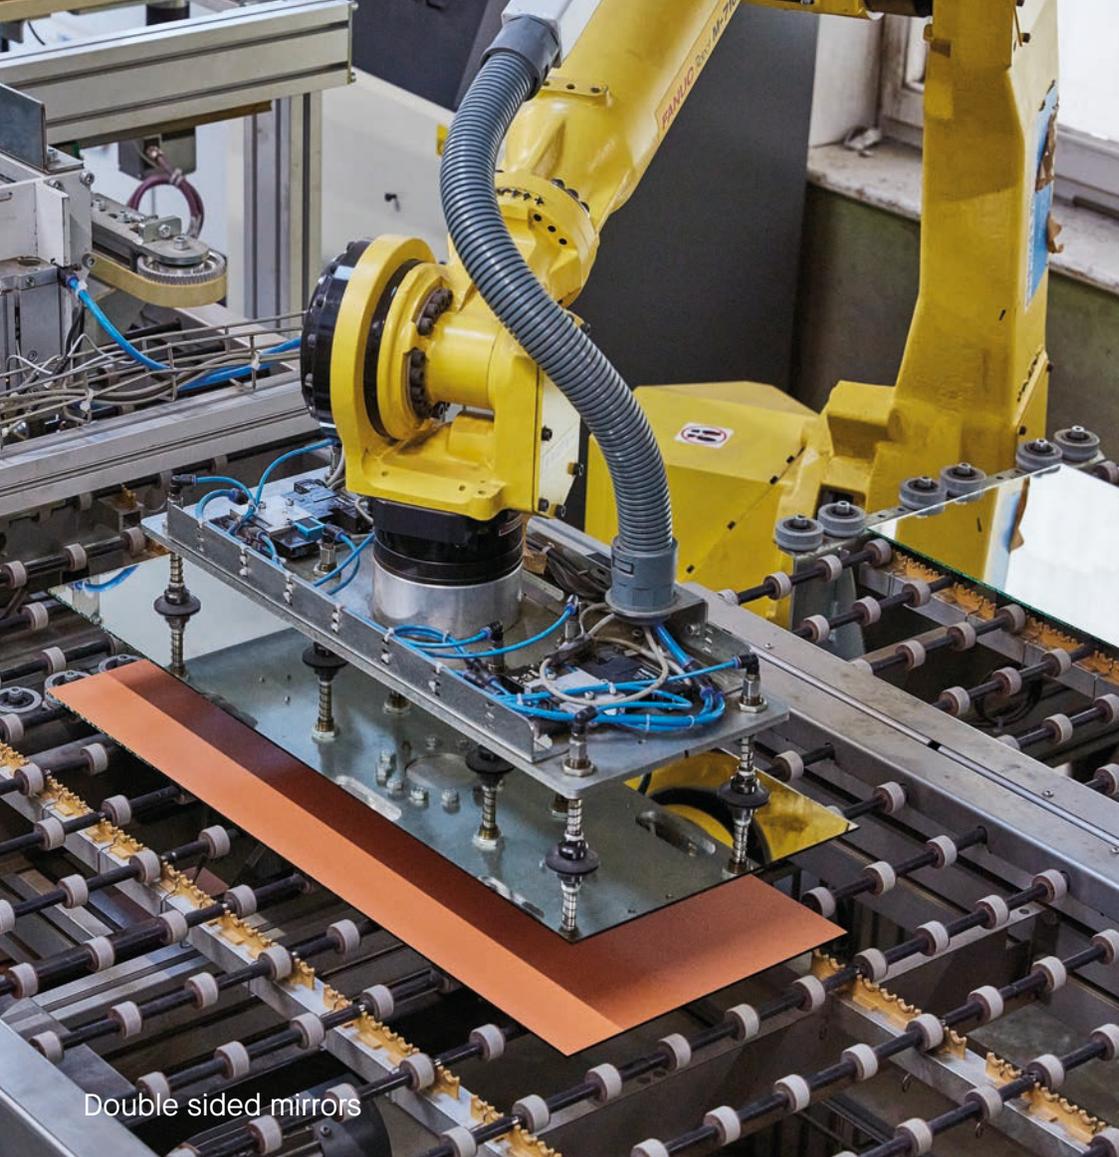

We can offer bevels with a variety of widths and chamfers. This polished bevel gives the finished mirror a beautiful "brilliant" touch.

Grinding and bevelling

Double sided mirrors

Packaging

Our mirrors are packed in sturdy cardboard boxes, securely fastened to pallets.

Double sided mirrors also receive protective corner pieces and the hinge plates are protected by caps to ensure delivery in perfect condition.

In recent years, our filler material has transitioned to 100% recyclable honeycomb cardboard. This minimizes the use of Styrofoam, in line with our commitment to sustainability.

Additionally, we offer the option of delivery in crates, wire mesh containers or A-frames, which can be reused multiple times. Good for our customers, great for our environment.

Double sided mirrors

We laminate 2 separate mirrors and transform them into 1 double sided mirror. This perfect bonding guarantees an extremely high durability against corrosion.

Bonding hinge plates

We specialise in the bonding of the different hinge plates - Blum, Grass and Salice - to the double sided mirrors and glue over 1 million pieces a year.

Packaging

A bespoke approach

We produce premium, made-to measure, single or double sided mirrors. As we export to over 60 countries, there is a Deknudt Mirror in every corner of the world.

Discover the different possibilities for your bathroom mirror.

Demister mat

Always a clear view after a hot shower with an easy voltage supply via the hinges. Our double sided mirrors with integrated demister mat in 12V or 24V are only 6mm thin.

Integrated LED light

No need for extra lighting. Elegant, functional and easy to install. Voltage supply via the hinges. Double sided mirrors with integrated LED are custom made.

Incorporated magnifying mirror

Our magnifying mirrors are perfectly integrated into a single or double sided mirror in order to obtain a beautiful aesthetic look and a flat mirror surface.

Position the zoom-function wherever you want by rotating the round mirror.

Let us know what you want

We can screenprint your detailed logo, touch symbols, company name or anything else. Our Master mirror makers will do the job.

A clear glass section in your mirror? No worries, we are on it.

Drilled holes for locks or doorpullers, pieces to be cut out for sockets or other applications? Deknudt Mirrors works it out.

Round shapes, oval shapes, special shapes? We love it.
